

Mercado-Medic REAL 9300 9400

manual task chair for paediatric use

This range of manual disability task chairs is designed for use by children with mobility limiting conditions to offer them maximum freedom of movement and independence at home and school.

REAL 9300 and 9400 are specialised indoor manual wheel chairs have size options and a range of cushions and adaptations to suit children of all ages and sizes. They also feature a modular construction which means they can adapt over time as a child grows or their condition or lifestyle changes. The 9300 has a gas activated riser function and on the 9400 that function is electrically powered. Both can be delivered with several other features such as seat tilt, backrest adjustment and braking.

These chairs have a discreet modern design that does not look out of place in most environments and offer all the benefits of a fully-functioning disability sit-stand task chair without the obvious appearance of disability equipment. The adjustable functions have been developed in consultation with medical experts to provide an optimal posture for children with many upholstered cushion options to provide unparalleled ergonomic posture and comfort for extended periods of sitting.

Manoeuvrable

The REAL 9300 and 9400 chairs help the user to move around with minimum of effort and feature a stable base measuring only 48 x 53cm for use in confined spaces.

The large diameter, omnidirectional castors have ultra-low friction bearings for a smooth-running experience and give superb manoeuvrability. These are available in a range of materials and sizes to allow this disability task chair to be moved across thresholds, obstacles and over different kinds of surfaces. The seat tilt function allows the user to transfer weight onto their feet and move around using the strength in their legs whilst maintaining secure contact with the chair.

With easy to operate height controls the user can elevate the chair into a high position for getting out of the chair into a standing position and back again and these assisted walking and standing activities can offer a sense of independence and help with physical rehabilitation.

Versatile

These chairs are equipped with up to 28cm height adjustment and you can safely raise or lower the seat to reach different heights whilst still seated. To transfer safely the seat adjustment can be used to position the chair at the perfect height and then with brakes engaged and the arms swung aside the chair acts as a highly stable support. It also offers three alternative designs for adjusting the seat angle, four types of backrest mechanism, three brake mechanisms and many cushion and support options.

Safety

This specialist manual task chair is designed to offer safe and secure help to users with mobility challenges. The REAL 9003 and 9400 have a stable, fully-welded frame made from Swedish steel of the highest quality and other components are designed with durability in mind offering many years of safe use.

The patented brake system is a key safety feature of the chair and makes the chair superbly stable when it is elevated or when getting in and out of the chair

Mercado Medic chairs are approved in accordance with SS-EN 1335, 1-3 and bear the CE mark

Comfort

This task chair can be continuously adjusted throughout the day promoting dynamic sitting which benefits anyone who uses a chair for extended periods of time. The tilt in space feature offers a recuperating posture to users between activities.

A wide variety of seat cushion and backrest sizes are available to facilitate better fit and comfort. With the help of consultant physiotherapist Bengt Engström Mercado medic have developed a seating system comprising moulded seat base and back, head and arm rests. Optional seat belts, footplate supports, side bolsters etc. are all available for increased support if required.
